's Weekly **HOMEWORK**

Assignments

MONDAY 	Read your passage aloud Mrs. Isenberg's class: practice your script- reading loud and proud, with expression for our assembly on Wednesday! Write each of your spelling words two times. Our test is Thursday. Use each of your tricky words in a complete sentence
TUESDAY 	Mrs. Isenberg's class: practice your script- reading loud and proud, with expression for our assembly on Wednesday! Write a sentence about precipitation and evaporation. Tell your family member the difference between a synonym and an antonym. Read your passage aloud
WEDNESDAY 	Write each of your spelling words two times. Our test is tomorrow, Thursday! Practice your vocab cards that you made last week for our test tomorrow. Fertile: able to produce farm crops and plants Source: the start or cause of something; where it begins Represents: stands for or symbolizes Unjust: not right or unfair Resembles: means to look like someone/something Custom: a habit, something you do often or continually
THURSDAY 	Draw arrays for the following: 3x3, 4x4, and 5x5 Tell your family member the difference between a synonym and an antonym. Read a story of your choice to your family member. Write the title here <hr/>

REMINDERS:

Red tasks must be turned in the following morning for full credit with your child's name on them. Black tasks must be completed, but not turned in (example: keep your flashcards at home).

- Homework will be sent home each Monday. Please keep this sheet in your child's folder throughout the week. If you need a second copy, we will post homework, along with our weekly newsletter to the CCS website. Click menu (upper right), classrooms, then 2nd grade. Please remember that items in red must be turned in the day after they are assigned.

Ch, sh, wh, t, ng, nk, & ng

Long and short vowel sounds

math FOCUS

Topic 2: Work With Equal Groups
Even and Odd Numbers
Arrays
Practice and Problem Solving
Missing Addends

The Water Cycle

The sun heats the water from ponds, rivers, and lakes.
It heats the water from puddles, streams, and oceans as well.
Then, the water evaporates!
It becomes vapor that floats in the air.
The vapor goes up and up and meets more vapor on its way.
Up and up the temperature goes down.
Vapor clumps together with more vapor in the air.
That makes clouds!
When cold air hits the clouds,
The vapor changes into water and the raindrops are created.
Then, precipitation happens!
Rain comes down and down. The streets are flooded,
Some rain runs off through fields and gardens.
The soil gets wet and moist.
The rest of water runs off,
It joins again the water in ponds, rivers, puddles,
streams, oceans, and lakes.
Once the sun comes back during the day,
The water cycle will start again.
